V_series

Although individuality is part of our philosophy, we created several standard types between 250 m² and 3000 m². The core of our V_series is a static-calculated galvanized steel construction covered by a high-quality membrane. It resists wind speeds of up to 150km/h or more, snow/sand load up to 150kg/m² and also earthquake-proofed.

Fabspace mobile hangars can be fixed on any type of ground and can be equipped with a wide range of extras, such as HVAC, fire detection and protection systems, solar panels, office areas, cranes and many more. For perfect delivery conditions every hangar part fits in standard 20' or 40' containers. Fabspace hangars are quickly produced and ready for operation.

V 01
L 18 | W 13 | H 5,6

V 01+
L 20,4 | W 14 | H 6

V 02

Flexlight Perform 832

We at Fabspace hangars only work with the best materials. Therefore we use the best available membrane product by Serge Ferrari for our hangar solutions.

SF is world leader in flexible composite material technology, provides expertise and products to help us to design ever-innovative projects. The lightweight, durable and recyclable solutions meet the functional and aesthetic requirements of sectors as diverse as building and industry.

Major advantages

- High dimensional stability due to Precontraint® technology
- Excellent UV resistance
- High coating thickness for higher abrasion resistance
- Low wick treatment (832-8100)
- Any colour upon request
